Professional Summary

A motivated Computer Science graduate skilled in Data Science, Machine Learning, and Full-Stack Development. Experienced in building and deploying ML models using Python, Pandas, Scikit-learn, TensorFlow, XGBoost, and LightGBM for real-world use cases like heart disease detection. Proficient in creating dynamic, user-friendly web interfaces with HTML, CSS, JavaScript, and React. Strong problem-solver with a passion for merging AI, web, and mobile technologies into impactful solutions.

Education

Bachelor of Computer Science – Kohsar University Murree (06-10-2021 – 15-09-2025)

Professional Experience

PSER Enumerator – Urban Unit (Government Project)

15 December 2025 – 31 May 2026 |

- Assisted in data management, verification, and reporting activities for the PSER project.
- Maintained accurate records and ensured timely completion of assigned project tasks.

Technical Skills

- **Programming:** Python
- **ML & Data Science:** Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch
- **Web Development:** HTML, CSS, Bootstrap, Flask
- **Database & Tools:** MySQL, Firebase, Git, GitHub, VS Code, Jupyter Notebook, Google Colab, Kaggle

Projects

- **Web Applications:** Developed full-stack web apps, including a Gym Management System and a Flask-based Heart Disease Detection System with ML integration.
- **Mobile Applications:** Built Android apps such as an Online Messenger (real-time chat in Java) and a Home Workout App for guided fitness tracking.
- **Machine Learning:** Created predictive models for Heart Disease Detection, Sales Forecasting, and Weather Prediction using advanced ML algorithms.
- **Deep Learning:** Designed CNN models for COVID-19 detection from X-ray images, showcasing strong medical image analysis skills.
- **NLP:** Implemented Sentiment Analysis pipelines for text classification and sentiment prediction.
- **Final Year Project:** *Heart Disease Detection & Diagnostic Aid* — integrated ML-based prediction with an interactive web interface for accessible diagnostic insights.

- **AI Automation:** Designed and implemented an automated client intake workflow using Zapier, Google Forms, Google Sheets, Google Drive, and Gmail. The system automatically captures form submissions, creates client-specific spreadsheet records from a predefined template, stores files in structured Google Drive folders, maps and synchronizes client data, and sends acknowledgement emails upon successful processing. The solution eliminates manual data entry, improves accuracy, and demonstrates practical workflow automation and integration skills.
